

BALLOON FORMING MACHINE FIXTURES

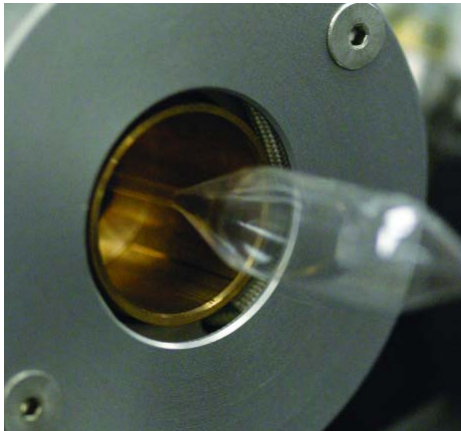

Figure 1: Tubing Air Chuck

Tubing Air Chucks are used to firmly grip a section of the tubing during the stretch portion of the balloon forming cycle. The chuck then supplies high pressure gas into the tubing during balloon forming.

- Variety of sizes
- Interchangeable

Figure 2: Water Chiller

The electric Water Chiller facilitates mold cooling within the Balloon Forming Machine.

- Simplifies machine setup
- Quick connect hoses

Figure 3: Water Recirculation Tank

The Water Recirculation System holds the chilled water that facilitates mold cooling in the Balloon Forming Machine.

- Simplifies Balloon Forming Machine setup
- No custom plumbing required
